Claim Rejections - 35 USC § 103

See previous office action.

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

The remarks made by applicant have been considered, however the above rejection are still deemed to be proper. First, an electrode located inside the patient's heart is not positively set forth in the claims, but merely the intended operation of the device if an electrode were located inside the patient's heart. Second, as mentioned in the previous office action, col. 10:18+ of Alferness teaches that the individual fibers can be selectively metallized and

therefore serving as the electrode conductors.

Consequently, Alferness can be fairly interpreted as having the ability to stimulate at least 50% of the heart using only one electrode. Since the fibers 21a and 21b touch each other, as shown in figure 9, they can be considered to be one electrode. As such, as is well known in the art, in operation the other electrode could be the housing of the ICD or an electrode inside the heart.
